

THINK AGAIN

REFLECT:

Consider possible constraints and assumptions carefully:
People: the resources and skill to do their work
Resources: the capital and revenue available
Time: look at the deadline for you to achieve your aims

QUESTION:

Have you considered all implications of establishing a link; both for yourselves and your partners? Goodwill and good intentions are not enough in themselves.

Checklist:

- ✓ What are your criteria for choosing a partner?
- ✓ Are you clear what your partner wants to get out of developing the link?
- ✓ Are you each clear about your own reasons for developing the link?
- ✓ Is a link the most effective way of achieving your objectives?
- ✓ Does each group have the necessary knowledge, ideas and experience or capacity to acquire them?
- ✓ Is learning from each other implicit within your objectives?
- ✓ Are you working towards a shared joint agenda?
- ✓ Have you established effective means of communication?
- ✓ Have you involved as many local groups as possible?
- ✓ Have you referred to the *Principles in Community Linking* in your discussions?

Next steps:

- Set up an initial linking group in your community.
- Consider the impact of a link within the community with the help of a 'critical friend'.
- Seek a suitable partner.
- Make contact with a potential partner.
- Discuss and try to agree the aims and outcomes together.
- Look at resources needed at both ends to sustain the link.
- Agree clear lines of communication.
- Establish a linking committee with a link co-ordinator at both ends of the link.
- Develop a Partnership Agreement or Memorandum of Understanding.
- Agree a small initial project using SMART objectives (**S**pecific, **M**easurable, **A**chievable, **R**ealistic, **T**imebound)
- Review progress with your partner regularly.

Planning for success

Planning is deciding in advance what to do, how to do it, when to do it and who is going to do it.

Thorough preparation and planning are the basic principles on which a successful course of action depends. Flexibility, and openness to different ideas and approaches, is also important.

Everyone should have a clear understanding of the aims and potential outcomes. Also the purpose, that is, why we do what we do, must be clear to all involved.

The objectives, that is what is expected; and how are we going to judge whether we have succeeded, need to be agreed.

Resources, including access to the necessary skills, need to be considered: the ability to do the job, act appropriately and do what needs to be done.

Capacity, or the time available to everyone every day, also needs careful consideration. People may be keen to be involved, but if they already have too many obligations they will not be able to contribute the time needed.

Planning should be a team activity. Involving many people with different perspectives will lead to greater understanding, acceptance and commitment by everyone of the project.

No one tests the depth of the river with both feet. *Ghanaian proverb*

Links may start through an existing tentative relationship or through a community seeking a partner. But no matter how the link starts there are a number of stages, as in any project, that are important to the development of any link.

Forming a group:

The most successful links are as inclusive as possible. Although the idea for a link may have started with one individual, no one can maintain a link on their own and others need to be involved. Do involve several people at both ends of the potential link.

Objectives:

In establishing *objectives* for the link, members of both groups need to be open about their *motives* for involvement. Motives may be focused on the benefits likely to be gained by one's own town, school or group or on the perceived benefits for the partner community. But honesty and transparency are key. Perceptions of what the relationship is about will probably differ as partners may come from very different educational, social, economic, political and possibly faith environments.

Potential resources:

At an early stage consider potential human and financial resources for the link. This should involve matching your objectives to the skills you have available. Don't be ambitious. Start small; with a defined and attainable goal for the first stage of the link.

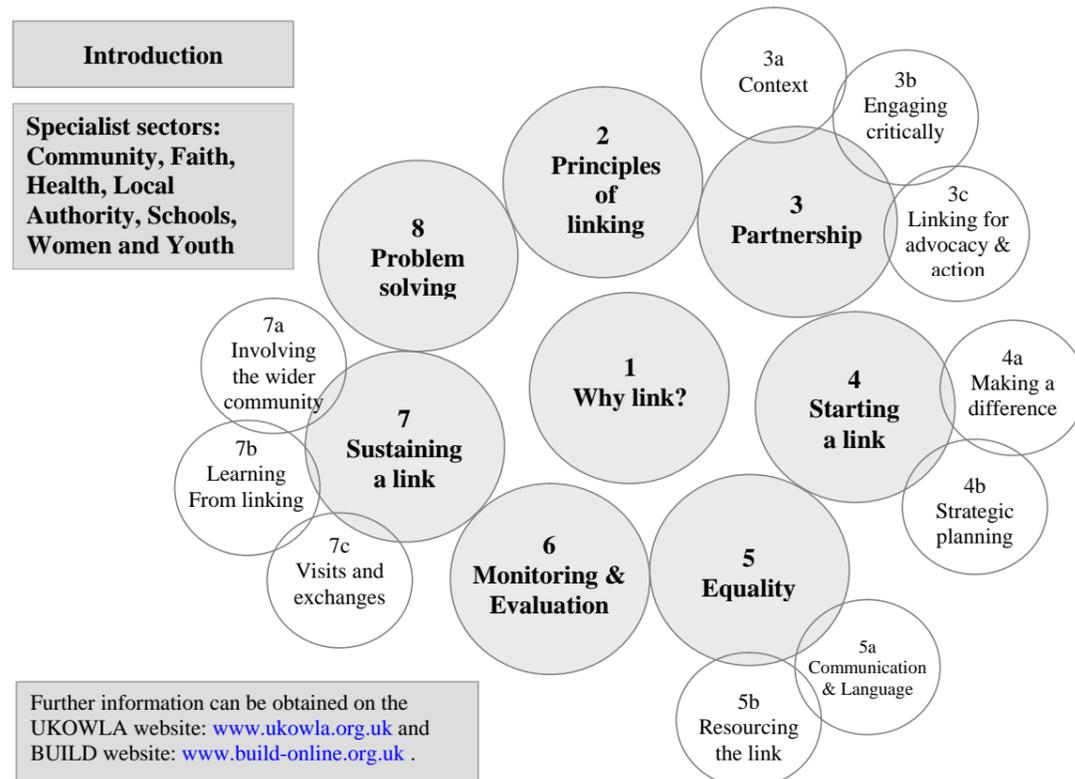

Inclusivity:

Once preliminary thoughts are clarified try to float ideas more widely within the organisation and community. Although difficult to start with, inclusivity enhances the link, aids sustainability and reduces the potential for conflict and disillusionment. But remember that stakeholders may have differing interests in the outcome of the link.

Steering committee:

A steering group or committees should be formed at each end with a strong link co-ordinator. It is vital that the group members will be in post, or remain committed, for a long time. Sensitising the community is critical to gaining community support and key members may act as collective champions for the link. If you are involving local government, try to involve all political parties. It is also important to match the people on the committee to the skills required such as finance, legal, public relations and fundraising.

Toolkit for Linking leaflets

Introduction

Specialist sectors: Community, Faith, Health, Local Authority, Schools, Women and Youth

What others say

A journey of a thousand miles begins with a single step. *Lao-tzu, China*

For tomorrow belongs to the people who prepare for it today. *African saying*

Those embarking on a link should appreciate the fact that most of the Southern countries you will be attempting to link with have suffered exploitation at the hands of most European countries.

Buddy Larrier, Barbados

We have to accept that by and large people who are involved in setting up links from the South are those who have been fortunate a) to attend school to a certain level, mostly beyond secondary school b) have made contacts with people from the North either back home or when they have travelled. As such, in addition to being involved in the main with world development, international justice, raising interest, etc they may also have very personal reasons. *Johannes Mallah, Sierra Leone*

The more elaborate our means of communication, the less we communicate. *Joseph Priestley, UK*

There is a sense of being used to suit the needs of the North. *S-N partnerships*

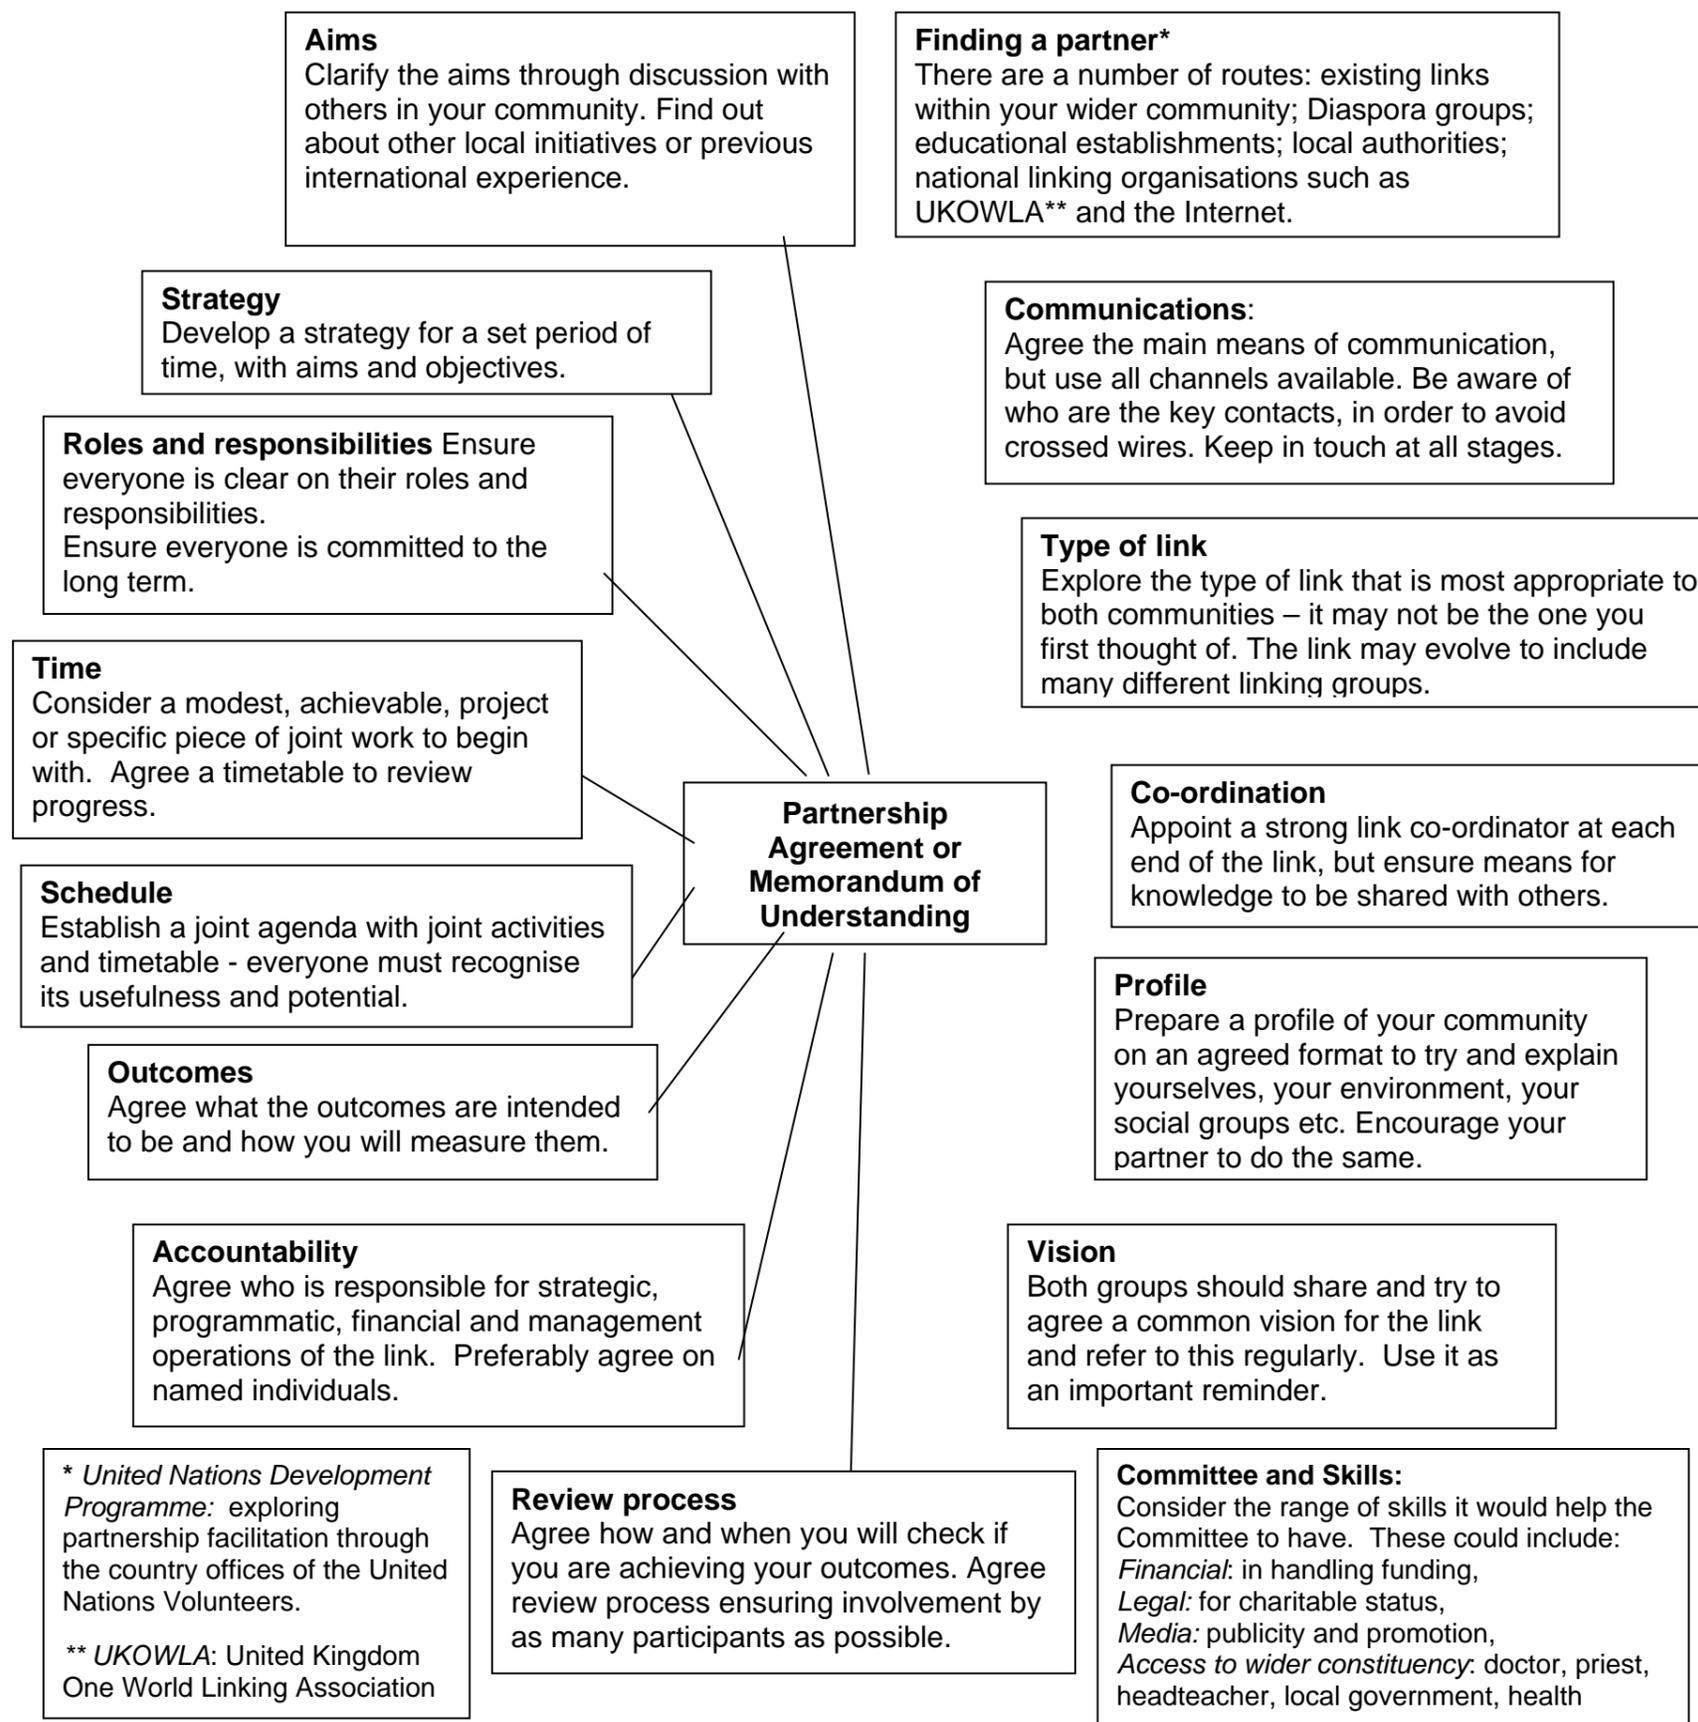

Failing to prepare is preparing to fail. *Unknown*

Learning about other cultures does not necessarily teach us anything about the racism of our own. *A. Sivanandan, Sri Lanka*

Note: Partnership Agreements or Memoranda of Understanding can only be developed once some discussion has taken place between partners.

Getting started

Discussion is needed on all of these areas both within your own community and between communities

Vision and flexibility

What happens when the vision of the South reinforces Western supremacy? What happens when the vision of the North reinforces Western supremacy? What happens when people romanticise the South?

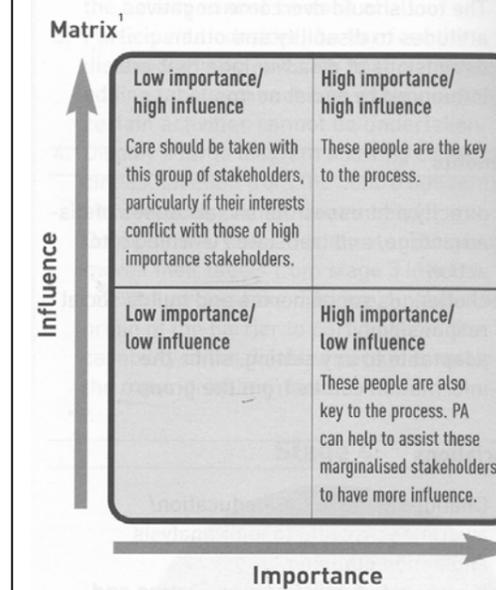

How can these concepts/assumptions be negotiated to create a level playing field for real dialogue and mutual learning? In order to begin this process, it is necessary to engage critically with our own assumptions about reality and about knowledge and with different perspectives. Exploring these concepts with partners can be a way forward, but it will require trust and openness to dialogue, to difference, to constructive conflict and to mutual transformations.

Stakeholder Analysis

This approach can be useful in identifying who you think are important to your link; and who can influence its success. They may not be the same people, and will need different treatment.

Participatory Approaches: A facilitator's guide, VSO, 2004
